

## Recommodation

According to buy cnc router from china, many people are curious beacurse of low prices and questions about quality etc.

My experience is good, but to be sure you must be able to communicate with the salesman of the factory, like I did. During this conversation you learn the company , and you see that they are seriously.

Today after buying my own cnc router from china, I will have no problem to recommend

**OMNI CNC Technology Co.,Ltd.** especially for their after –sale service.

Their salesman Zack zun is doing a very good job making sure everything is in order, and he communicate very good.
